Japanese Examined Patent Publication No. 8-18011 discloses an automatic weighing machine for elongated vegetables, having first transfer belts 8, second transfer belts 15 and a weighing device 4. The elongated vegetables are transported up to the end of the first transport belts 8 such that the longitudinal direction of the elongated vegetable is perpendicular to the transporting direction of the first transfer belts 8. The elongated vegetables then go through the guide chute 16 and change its orientation, such that the longitudinal direction of the elongated vegetables is parallel to the transporting direction of the second transfer belts 15.

Japanese Patent No. 3168494 discloses a conveyor-weigher having a weight categorizer 20 and a weighing conveyor 63. When an item W is transported to the end of chains 45 of the weight categorizer 20, the item W is moved onto chains 85 of the weighing conveyor 63. The chains 45 and the chains 85 are rotated at the same speed, and are positioned such that ends of the chains 45 and the chains 85 overlap and are substantially at the same height (Figure 9).

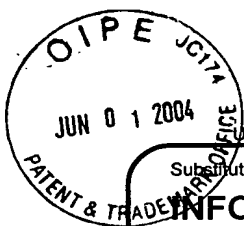

Prompt examination on the merits is respectfully requested.

Respectfully submitted,
